From our patients...

“BioniCare gave me my life back.”

“Because of BioniCare, I have been able to start walking again and enjoying my life…”

“Without the knee device, I would have had to have a total knee replacement.”

“At 68 years old, I can enjoy my life without pain in my knee.”

“I wish I had known about BioniCare before my first surgery, it would have saved me a lot – in terms of pain and recovery time.”
WHAT IS BIONICARE?

The BioniCare Knee System is a combination of an electrical signal attached by an osteoarthritis knee brace. The system delivers an imperceptible pulsed electrical signal that was designed specifically for the treatment of pain and other symptoms and for the overall improvement of the osteoarthritic knee. The brace provides pain relief by taking pressure off the knee while weight-bearing and by providing stability.

FREQUENTLY ASKED QUESTIONS

Q  Who should use BioniCare?
A  BioniCare can be used by anyone who has osteoarthritis (OA) of the knee—mild, moderate or severe. However, we have found that when your OA is hindering your daily activity, you are most motivated to get enough hours to see results.

Q  Are some knees too “far gone” to benefit from BioniCare?
A  No. In a study to determine if the BioniCare System could defer Total Knee Replacement surgery, the patients who saw the most dramatic results were those in the most severe group.

Q  How long do I have to wear it to see results?
A  When wearing the BioniCare System with a brace, you will notice immediate results from the brace because it takes pressure off of the knee. Results from BioniCare will be seen in 1-2 months depending on how often you wear it.

Q  Do I have to use the brace?
A  Our research shows that when you use the BioniCare System with the brace, you see 39% greater improvements in 75% less time. The BioniCare should be worn in the brace whenever you are on your feet for sizable amounts of time. It usually takes about a week to get comfortable wearing the brace. As your knee starts to feel better, you will likely need the brace less and less.

CLINICALLY PROVEN

- 2/3 RDS of patients avoided a total knee replacement for 4+ years
- Significant Improvement in:
  - Function/Activity Level
  - Range of Motion
- Significant Reduction in:
  - Pain
  - Morning Stiffness
- 45% of patients reduced their anti-inflammatories like Advil® and Aleve® by 50% or more
